

PRESS RELEASE

WIT Software to showcase the first worldwide implementation of RCS on a smartwatch

Barcelona, 4th March 2015: WIT Software, a leading provider of rich and unified communications for Mobile Operators, announced today the availability of its RCS product running on Android smartwatches.

With this release, users will be able to receive messages, pictures, map locations and voice call identifications directly on their smartwatch. They can execute fast operations like replying to a text message with an audio-clip, navigate to a location or reply to an incoming call with a custom text message.

Luis Silva, CEO of WIT Software, said: "The rapidly growing use of Android smartwatches and the forthcoming Apple watch will create a new paradigm in the way people interact with mobile communications at the distance of their wrist". In trials, the user experience has proven to be surprisingly addictive, and WIT will continue to extend the capability further to support Mobile Operators' voice and messaging service evolution".

WIT will showcase this release of rich communications on a smartwatch at Mobile World Congress in Barcelona, in Hall 6, stand 6C60.
